Indian Red Cross Society

Branch Sitapur U.P.
(Constituted Under Act XV of 1920)

President,
District Magistrate,
Sitapur (UP) 261001

Chairman,
Sanjeev Mehrotra
Rampa Ice Factory
Station Road,
Sitapur (U.P) 261001

Date: 04-07-2024

CERTIFICATION OF COMPLETION

This is to certify that **Ms Arpita Rajput** from FLAME University, Pune, has interned with Indian Red Cross Socieity Branch, Sitapur, U.P. from 17th May 2024 to 22 June 2024.

The student has successfully completed the work in **First Aid & Tuberculosis Awareness.**

During the internship she demonstrated good design skills and self-motivated attitude to learn new things, her performance exceeded expectation and was able to complete the projects successfully on time.

I found the student responsible and efficient and their conduct during the internship was satisfactory.

Abstract

Internship at the Indian Red Cross Society Sitapur: A Rewarding Journey of Service and Learning

This internship report details my experience as an intern at the Indian Red Cross Society (IRCS) in Sitapur, India. The report is divided into three parts. Part I describes the motivation for choosing the IRCS, highlighting the organization's reach, focus on health initiatives, and proximity to the student's residence. Part II details the various tasks undertaken by me, including data management, presentation creation and support, participation in first-aid training activities, patient monitoring for tuberculosis patients, and finally, organizing and delivering a first-aid training program at a local school. Part III explores the learnings and reflections gained from these experiences. At last I have emphasized the importance of first-aid knowledge for all age groups and backgrounds, citing impactful stories shared by participants. The challenges of catering to diverse learning styles, handling anxieties, and navigating the emotional weight of first-aid situations are discussed, highlighting my growth in communication, empathy, and adaptability. The report concludes with a newfound dedication to promoting first-aid literacy and a desire to empower others through knowledge sharing.

Part I - Motivation to choose the NGO* (maximum 300 words)

Choosing the right NGO for volunteer work can feel overwhelming. Thankfully, the Indian Red Cross Society, Sitapur presents itself as an ideal platform to leverage my desire to serve the community.

Firstly, the voluntary humanitarian organization has a network of over 1100 branches throughout the country with a global reach (*IRCS Home*). It provides a direct path to make a tangible difference on the ground level. Here, you can be actively involved in health camps and disaster relief efforts. Their SERV program trains volunteers for emergencies and educates communities on health and preparedness. They also run a blood center, offer thalassemia care, and have programs for flood warning, livelihoods, education, first aid, reconnecting families, building community resilience, fighting tuberculosis, and engaging young people in humanitarian work.

Secondly, the focus on health resonates with my passion for serving people. The Indian Red Cross Society Sitapur's health camps cater directly to those in need of medical attention. Being part of these initiatives allows me to contribute directly to the well-being of my community as well as it will give me an opportunity to learn and work with the experts..

The IRCS also presents a valuable opportunity for professional exploration. Volunteering allows you to network with experienced humanitarians working on various initiatives. These connections can provide insights into different career paths in the social impact sector. Whether you're interested in social work, disaster management, or nonprofit management, working alongside these professionals can help you determine if this aligns with your long-term goals.

Finally, the Society's proximity to my home offers an undeniable advantage. This ease of access allows me to volunteer more frequently and strategically plan my contributions around my schedule. Additionally, being situated close by fosters a sense of local ownership and a deeper connection to the community I will be helping.

Part II - Description of duties/tasks assigned to the student during the internship

(about 800 - 1000 words)

I gained useful experience in a variety of areas during my internship at the Indian Red Cross Society, including data operations, interacting with the community, and support for training programs. The following is a thorough explanation of the responsibilities and tasks I was given:

Data Management and Record Keeping

Participant Registration and Documentation: A significant portion of my work involved maintaining accurate records of participants enrolled in different training programs. This included collecting and organizing their registration forms, identification documents, and any other relevant paperwork. I ensured all information was filed correctly and accessible for future reference.

Form Management: I filled out various forms used for program registration, attendance tracking, and performance evaluation. This involved understanding the purpose of each form, accurately entering participant details, and maintaining a consistent format for easy data retrieval.

Training Program Support

Presentation Creation: I was entrusted with the task of creating presentations on fundamental topics related to the training programs, such as heatwave awareness and safety measures, and editing data in existing presentations if needed. This involved researching the subject matter, designing clear and informative slides, and incorporating visuals to enhance understanding for the participants.

Presentation Management: I was a key player in overseeing the presentations during the training sessions. This included adjusting the projector, making sure the slides transitioned smoothly, and fixing any technological problems that came up throughout the presentation.

First Aid Training Participation

Interactive Activities: While assisting with the First Aid training program at Dalmia Bharat Sugar and Industries Ltd., I actively participated in various group activities organized by the supervisor. These activities typically involved simulating real-life scenarios after each training module. My role within the group involved:

Collaborative Storytelling: I helped my group create a compelling narrative around the first-aid situation we were presented with. This storytelling element likely enhanced engagement and memory retention for the participants.

Guiding Performance: I assisted my group members in correctly performing first-aid techniques and rescue procedures. If someone made a mistake, I offered constructive feedback and helped them understand the correct approach.

Individualized Support: In addition to group activities, I was encouraged to assist participants individually. This involved clarifying doubts, answering questions, and ensuring everyone grasped the critical first-aid concepts being taught.

Community Outreach: Tuberculosis Patient Support

Patient Monitoring: A unique aspect of my internship included making alternate-day calls to monitor the health and medication adherence of tuberculosis (TB) patients. This involved:

Patient communication: Building a relationship and keeping lines of communication open with patients to learn about their health, any drug side effects they may be having, and to make sure they are taking their prescriptions as directed.

Tracking Improvement: Ensuring that patients followed the treatment plan and documenting information about their health. This data likely played a crucial role in tracking patient progress and providing better care.

Organizing and Delivering a First-Aid Training Program

My final task was to independently organize and deliver a first-aid training program at a government school in my village. This initiative was taken not only to check my leadership and organizational skills but also my commitment to community service and knowledge sharing. Here's a breakdown of the task:

Planning and Coordination: Identify a suitable school and obtain permission from the principal. Arrange logistics, including scheduling the program, gathering necessary supplies (bandages, props, laptop, etc.), and potentially recruiting any helpers (teachers).

Tailoring the Training: Recognizing that my audience was Class 5 students, I created a presentation with a lot more graphics instead of words. Later on, I got it approved by my supervisor. This taught me how to adapt information to a younger audience. I used simpler language, engaging visuals, and interactive activities to keep the students engaged and ensure they understood the core first-aid principles.

Delivering the Training: I delivered the first-aid training program alone, but I took the help of teachers in the school for settling students. This built my confidence and ability to communicate complex information in a clear and age-appropriate manner. I used:

Interactive activities: Games, role-playing scenarios, or demonstrations to make learning fun and engaging for the students.

Clear explanations: Breaking down first-aid procedures into simple steps and using everyday language the students could understand.

Documentation: I documented the event at the end by collecting details like the number of participants, topics covered, and capturing photos as proof of the program's execution. This demonstrates my attention to detail and ability to maintain clear records, which I had to present to my supervisor.

Overall, my internship at the IRCS was a well-rounded experience. I gained valuable skills in data management, communication through presentations, practical application of first-aid techniques, and patient care. Additionally, I demonstrated initiative, leadership, and a commitment to community service by organizing a first-aid training program for my village school.

Part III - Experiences and Learning (elaborate through examples), and Reflections

(about 600 - 800 words)

Being a first-aid trainer meant more than just passing along knowledge to others; it was a complex web of varied experiences and insights. The training room changed into a gathering place for all ages, with each generation bringing a different viewpoint on the significance of first aid.

My trainees' ages ranged from excited 22-year-olds to experienced folks in their 60s, which provided an unexpected thrill.

Their prior knowledge of first aid varied widely. Some possessed a strong foundation, while others had minimal exposure. However, the eagerness to learn that resonated across the group was truly inspiring.

The most impactful learning came not from textbooks but from the lived experiences shared by participants. One poignant story came from a man with a permanently disfigured hand. A childhood accident involving scalding water left him with a lifelong reminder of the crucial role first aid plays. His family's lack of basic first-aid knowledge and delayed access to medical care resulted in this permanent consequence. His voice, which was a mixture of resolve and sorrow, emphasized how serious the lessons we were studying were. It was not only about healing wounds; it was also about averting potentially fatal circumstances.

Another participant recounted a harrowing experience with electric shock at work. He vividly described how a fellow worker's swift action and knowledge of first-aid procedures likely saved his life. This story highlighted the critical role bystanders play in emergencies and the power of a community equipped with first-aid skills.

Initially, there was a sense of awkwardness in providing instructions to individuals significantly older than myself. However, their unwavering respect and thirst for knowledge quickly put me at ease. Establishing a balance between acknowledging their observations and ensuring they understood the essential methods became my guiding concept. Seeing how eager they were to learn, regardless of age, confirmed the fact that first-aid knowledge is universal and has the ability to empower individuals from every aspect of life.

A particularly rewarding experience unfolded with TB patients. Over time, conversations about their health and progress fostered a genuine connection. Experiencing the positive outcomes of the right treatment and hearing about their remarkable stories gave me a strong feeling of purpose for my work.

Possibly the most enjoyable encounter occurred during a first-aid instruction session with a fifth-grade class. Their boundless interest and contagious excitement were a welcome change of pace. It was difficult but really entertaining to respond to their simple inquiries, which ranged from the basic "Why do we have to learn this?" to the unexpectedly perceptive "Can we help animals too?"

It solidified the importance of starting first-aid education early, not just for their personal safety but also to cultivate a generation equipped to help others.

This event has left me with a lifelong dedication to first-aid literacy promotion. Not only is technical proficiency important, but so is the potential to save lives, lessen suffering, and give people the confidence to take an active role in their own security and the safety of those surrounding them. A desire to impart this important information and improve the world, one

first-aid instruction at a time, was stoked by the training's exposure to a variety of viewpoints and experiences.

Beyond the heartwarming stories and valuable lessons, my first-aid training journey also presented some interesting challenges that pushed me to become a more effective instructor. Here's a deeper dive into some of those experiences:

Navigating Diverse Learning Styles: One challenge involved catering to a variety of learning styles within the group. While some participants thrived on hands-on practice with CPR mannequins, others preferred visual aids and clear explanations. I learned to adapt my explanation methods, incorporating a mix of techniques like role-playing scenarios, interactive demonstrations, and open discussions to ensure everyone grasped the concepts effectively.

Handling Unexpected Situations: The training wasn't always smooth sailing. There were times when participants came with misconceptions or anxieties about first-aid procedures. One instance involved a participant who expressed a fear of blood, making them hesitant during wound dressing practice. In such situations, patience and clear communication became crucial. I focused on the importance of overcoming initial anxieties to potentially save a life, while offering alternative ways to practice without directly handling simulated blood.

Balancing Confidence and Humility: As a young instructor, it was initially daunting to lead a group with a wider range of life experiences. However, I found that acknowledging my limitations while demonstrating a strong grasp of the subject matter went a long way. My supervisor and I actively encouraged questions and discussions, learning from the participants' experiences while confidently guiding them through the core first-aid principles. This fostered a collaborative learning environment where everyone felt comfortable contributing.

The Power of Empathy: The most challenging aspect, however, was witnessing the emotional impact of first-aid stories. The participant with the disfigured hand displayed a vulnerability

that demanded empathy and sensitivity. In such moments, creating a safe space for sharing and acknowledging their struggles became crucial. While maintaining a professional demeanor, My supervisor ensured they felt heard and understood the value of their experience as a powerful learning tool for others.

These difficulties helped me grow personally and put my teaching abilities to the test. They emphasized the value of flexibility, lucid communication, and a sincere desire to establish a personal connection with each participant. In the end, these experiences helped me become a more versatile teacher who can better meet the requirements of a wide range of students and provide a supportive learning environment.
